

Since the day it was founded in 1916, Jabel Incorporated has built its position in our industry on a foundation of quality, integrity, consistency and caring. We are unique in our efforts to promote the professionalism of the retail jeweler and strengthen his reputation in his own community. The excellence of our product is matched by the skills and knowledge of the team that produces and services it.

On the following, fact-filled pages, you will find a description of our Die-striking Method and an introduction to this book. In addition: Our gold has been plumb for all of our 71 years. That includes our solder. Every craftsman works with a loupe. Every finding is polished and re-polished before it's assembled into a finished piece. With very few exceptions, everything we use and sell is manufactured here in our building by people trained in a Jabel program.

Above all, *Jabel is people*. All of us, backed by an unbeatable combination of innovative ideas and old-fashioned principles, will continue to serve you as diligently and dependably in the future as we have in the past.

Alan H. Herman, *President*
June A. Herman, *Vice President*
Daniel D. Herman, *Secretary/Treasurer*

The Jabel Method of Die-Striking and Forging

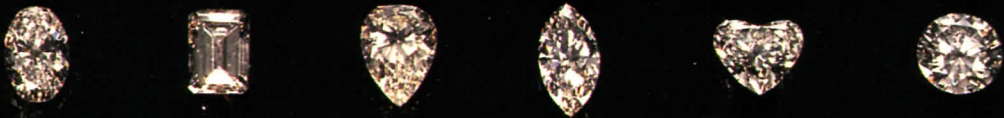

ROLL and STRIKE! ROLL and STRIKE! These are the magic words that give Jabel shanks and settings their wearability and precise lines. They make possible the fine workmanship and exquisite detail.

The gold used in Jabel rings and jewelry is alloyed in our own factory, formed into bars and then rolled under heavy pressure. This produces a metal ribbon that is non-porous, solid, homogenous and uniformly strong in the desired thickness. Cut to proper size, the pieces are blanked out by dies in various shapes. These pieces are then put through alternate operations of pressure (striking) and heat treatment (annealing) as demonstrated in the drawing above. All of this results in a perfectly proportioned mounting that can be readily resized without injury to the metal.

The mounting illustrated is one of many created to retain its superior finish and play your diamond in the most beautiful, *safest* manner possible.

BOWKNOT CLASP CH301

Curb link necklace chain available in 14K yellow gold or 14K white gold.*

The CH301 chain is unique because of its function and safety. The clasp cannot become detached without manual effort on the wearer's part. The safety clasp is easily closed as illustrated in the diagram. Available in 14K white gold or 14K yellow gold.*

Two styles of chain are available where chain is purchased separately.
 CH201 with springring — CH301 with bowknot clasp
 CH220 with springring — CH320 with bowknot clasp

Diamond Add-A-Section® Bracelets

DC FB10 Available in 18K yellow gold, or 18K white gold.

FB10/1
Diamond Starter
Total Dia. Weight .11 FC

FB10
Diamond Added Section
Total Dia. Weight .11 FC

FB10
Diamond Clasp Section
This unit completes bracelet
Total Dia. Weight .11 FC

Complete bracelet consists of a starter plus 8 sections plus a clasp section. Bracelet available with any number of sections from FB10/1 through FB10/10 (complete).

DC FB11 Available in 18K yellow gold or 18K white gold.

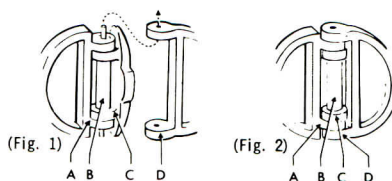

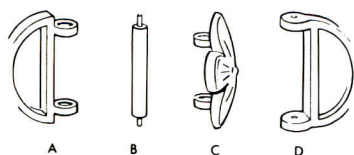

FB11/1
Diamond Starter
Total Dia. Weight .28 SC

FB11
Diamond Added Section
Total Dia. Weight .23 SC

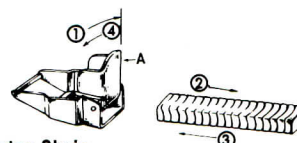

FB11
Diamond Clasp Section
This unit completes bracelet
Total Dia. Weight .18 SC

Complete bracelet consists of a starter plus 8 sections plus a clasp section. Bracelet available with any number of sections from FB11/1 through FB11/10 (complete).

Adding a section to a bracelet is as simple as ABC. It's the same spring pin technique you would use when attaching a watch band to a watch case. As sections are added the chain portion naturally reduces in length. The last section added carries a hidden clasp. When this clasp section is applied it replaces the final portion of the chain and the bracelet unit is then complete.

To assemble "add-a-section bracelet" place "A" and "C" together. Slip "B" through openings of "A" and "C" (Fig. 1). Depress spring pins of "B" and snap "D" over "B" (Fig. 2).

To Shorten Chain:

- 1) Lift clip A on underside of adjustment box;
- 2) Pull chain out and cut to shorten;
- 3) Push chain into box;
- 4) Close clip tightly.

Diamond Add-A-Section® Bracelets (continued)

Abbreviations:

- DC** — product completely mounted with diamonds, colored stones or pearls.
- FC** — full cut diamonds

Blank Fancy Brooch Remount Series SX

All brooches illustrated on the opposite page are blanks provided for the remounting of your customer's heirloom diamonds and colored gems only.

Prices quoted apply as long as your customer's diamonds are within the size limitations specified.

All prices, including setting charges, appear in enclosed price booklet.

These brooches can be worn as pendants with application of proper finding.

"A" indicates linear placement of melee.

"B" indicates random or scattered placement of melee.
